The AGB1 is the new adjustable gas block for AR15 type rifles from D.F. MAISEY GUNSMITHING. Over a year in development, it is specifically designed to allow the shooter to easily and quickly adjust the standard AR gas system to prevent or reduce 'over-gassing' which may cause premature parts breakage, damage to fired cases, or other problems such as excessive gas-blowback past the charger handle and into the shooters eyes - particularly when these rifles are used in conjunction with a suppressor.

Featuring up to 32 repeatable click-stop settings from fully-closed to fully-open, and simple one-tool operation. As with all NZ-made D.F. Maisey products, the AGB1 is a registered design, and international patents are pending. **For more info about this and other products see: [www.gunsmith.co.nz](http://www.gunsmith.co.nz)**

AGB1 specifications:

- Suits barrel journal diameter: 0.750"
- Solid steel construction, black nitrided finish for surface hardness and good rust resistance
- Stainless steel M4 main adjustment screw
- 1/8" diameter detent ball and spring system (easily removable if required)
- Stainless wave pin for gas tube retention included
- Clamps securely to barrel with 2x small grub screws on underside
- Flat sides of gas block body make fitting, alignment, and gas tube installation easier
- Unique/novel offset angled adjustment screw design permits more clicks per revolution, and a more robust and reliable screw design as the threaded section is not violated with machined slots.
- Weight: 94 grams (3.35oz). Block length: 1.250" (31.75mm)
- Low profile design – but may not be a clearance fit inside some extra-long forend tube designs of very small diameter or restrictive internal geometry. It WILL FIT inside a free-float tube that has at least 1.5" (38.1mm) or larger internal diameter.(i.e. Hogue 1.565" I.D. short or long free-float tubes work fine.) Will NOT (for example) fit inside NEA Quad rail or similar slim forends with 1.365" (34.6mm) I.D. without modification to the forend tube itself. Contact us if you need any assistance.
- Comes with allen keys and a spacer/shim washer to aid in gas port alignment for some rifles.

(Note: Long ball-end type allen key is now supplied with kit for easier alignment when adjusting gas setting, especially if gas block is located inside of a free-float forend tube.)
